**SECURITY MADE IN GERMANY**

# OUR INNOVATION STARTS WHERE OTHER'S END!

OUR MISSION TO INNOVATION

#USE AI TO SUPPORT HUMAN OPERATORS

#MAKE USE OF NEW CONNECTIVITY

#ADVANCE NEW SENSORS

#EXPLORE ROBOTICS

Our professional curiosity has always driven us to change the status quo. For this reason, we do not rest on our laurels but continually improve the quality of our solutions at the fastest pace possible. The cycles of innovation in the technology industry have shortened dramatically; new threat technologies are constantly emerging.

At unival, one of our primary goals is our steadfast commitment to staying ahead of these cycles. We focus on developing countermeasures that include the implementation of new devices, sensors, and software. Agile resources and project management are essential to our work. We operate in short sprints to achieve rapid yet high-quality wins. INNOVATION is a key element of our work. Combined with the hard work, innovation is the key to transformation.

# MAKE USE OF MODERN SCREENING TECHNOLOGIES!

Being sensor agnostic, we will always use the best possible technology for specific requirements. unival is able to provide an industry leading array of screening technologies, helping our clients to use the most adequate solution. From Transmission X-Ray to Backscatter, from CT to Muon Tomography, from Millimeterwave to Terahertz and Metal Detection, from vibration sensing to High-end Camera systems. We will always use the best sensor to create the most appropriate solution.

With our uniGATE Screening checkpoints we provide clients with the ultimate multi-sensor platforms that make threats visible. Our industry leading radiation security concept means that all Non-Intrusion Inspection Systems delivered are fully compliant to the ANSI 43.17-2009 standard making them perfectly safe for passengers but also operators at site with an industry leading throughput!

**#MAKING HIDDEN THREATS VISIBLE**

**#STOP ILLICIT TRAFFICKING**

**#ENABLE FAST THROUGHPUT**

**#MAKE TRANSPORTATION TRACEABLE**

# INTEGRATION IS THE HEART OF SECURITY!

- #CONNECT NEW SENSORS FASTER
- #PREDICTIVE MACHINE CAPABILITIES
- #REDUCE COMPLEXITY
- #MULTI-LEVEL REDUNDANCY

The ever growing complexity of a hybrid threatscape requires more adaptive solutions than ever to respond adequately. Today only a single digit number of global shipments are being monitored due to a lack of screening resources. This is a clear call-to-action to stop the illicit trafficking of substances, which are fueling global conflicts. It is only with an integration of market leading sensors that are working in a highly efficient set-up that will allow organizations to keep pace with future challenges and stay ahead of the threat.

In over 20 years of work in this field, we have developed a fine set of tools that enable us to be highly adaptable and responsive to our customers' requirements. Our goal is to understand the security requirements from the ground up and connect the dots.

# AUTOMATION WILL LET HUMANS SHINE!

Automation leads to a reduction in the human factor within the performance of important functions. However, for ownership and efficient monitoring, a certain level of skill is required. For this reason, unival considers the capacity building of border officials and other operators an essential service. With CAPACITY BUILDING, which could be either in-service or introductory, the customer is well-equipped to ensure the efficient use of next-level equipment.

Technology must always augment human capabilities, not replace them. We are strongly enforcing the human factor as one of the biggest benefits of automation. Qualified and well-organised operators will always make the best decision and provide critical thinking, when necessary.

**#FUTURE OF TECHNOLOGY**

**#FUTURE OF SECURITY**

**#FUTURE OF SERVICE**

**#FUTURE OF WORK**

# DIGITIZATION IS THE GREAT ENABLER!

#CONTROLLED & OPTIMIZED WORKFLOWS

#IMPROVED ACCESSIBILITY & USER EXPERIENCE

#REAL TIME DATA & REPORTING

#ENHANCE COLLABORATION

Coming from a hardware dominated background, we are strongly adapting our business models to the new cloud based models such as Security as a Service (SecaaS).

With our int3grate platform we manage sensors and applications turning to offer a new range of digital security solutions and services to our clients. With SecaaS we can offer a convenient and scalable way for businesses of all sizes to improve their screening and security postures.

Automated systems lead to the creation of a database that is critical not only for monitoring but also for socio-economic planning.

This ensures that reliable data and corresponding info-graphics are readily available for decision-making and policy guidance. Our prioritization of software development enhances this data, making it comprehensible to policy makers. Our high-security server cluster is based in Germany providing to ensure highest operational availability. Our software can be deployed on-premise or through the unival cloud infrastructure.

# EXTEND SECURITY WITH MOBILE SOLUTIONS!

The demand for mobile screening and surveillance vehicles is rapidly increasing. unival is manufacturing vehicles in Germany providing maximum capabilities to our clients on the move. With full remote connectivity, these vehicles extend stationary infrastructures and are an essential tool for increased coverage. Renowned German craftsmanship, state-of-the-art technology and highest-quality materials mean that our vehicles will work reliably in harsh environments.

All vehicles are customized to a client specific scope and extensive training is provided to ensure best usage under all conditions. Our unival Service Team will provide client specific Service-Level-Agreements on a global scale.

# SECURITY DRIVES GROWTH!

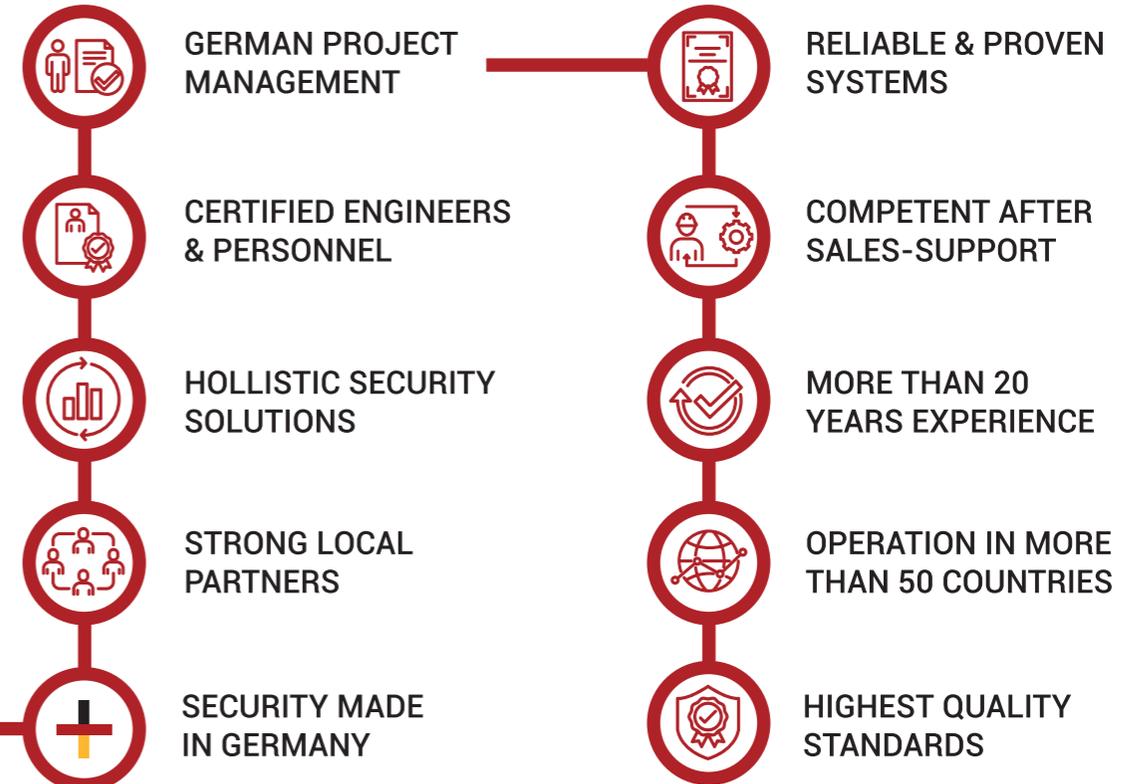

# WE DRIVE SECURITY!

The increasing rate and sophistication of threats near border regions necessitate up-to-date technology and strategies to keep territorial entities secure. The worsening global statistics on transnational crimes call for more than just technology; they require robust partnerships to keep up with the rapidly changing modus operandi of criminal actors. unival offers such partnership enabling growth through better security.

At unival, we recognize that states are in constant transition. We are comfortable collaborating with institutions to ensure that this transition is secure. For this reason, we allow our customers to take the lead while offering the best advice. The customer understands their environment better—we are positioned to provide services that maximize success. Our experience in over 60 countries underlines this.

We believe in quality, honesty, great service & hard work.

# CORPORATE INFORMATION

Headquarters in Bonn, Germany - since 2003  
 MANUFACTURER, INTEGRATOR, INNOVATOR

- NATO CAGE Code: CN1A1
- German AVPQ Certificate
- ISO 9001:2015, ISO 27001 (ONG)  
Tapa Security Service Provider (SSP)
- Over 40 Years of accumulated  
Customs and Border Experience
- Certified Project Management  
Resources PMI
- Service Teams in Europe, Middle East and Africa  
Dedicated Security Consultancy with seasoned experts
- High-secure unival server cluster
- Dedicated unival software development teams in Europe
- int3grate framework with dedicated unival applications

Over the last 20 years we have carefully crafted a group of companies and a strong brand portfolio that are built to provide operational excellence for our clients. Our extensive reach covers Europe, the Middle East and Africa and we are committed to provide our expertise for a geopolitical region that is closely attached to the heart of Europe.

Our vision is to enable trade, growth and collaboration through a stable security mesh that prevents illicit trafficking. As our society is at risk from uncontrolled migration and narco terrorism, we closely engage with our partners and allies to protect what is at stake and build a future based on united values.

# OUR MISSION IS TO PROVIDE 360° PROTECTION!

360<sup>+</sup>

With our holistic security solutions we take a comprehensive approach to safeguarding your assets, be it physical or digital. We cover all aspects of security and integrate them into a cohesive strategy. This includes a multi-layered sensor and technology approach, appropriate risk assessment, a focus on people, processes and technology, and ensuring adaptability to respond to the ever faster changing threat landscape.

Our aim is to improve our client's current situation in short innovation sprints. Taking a 360-degree approach will ensure that we look at the situation from all angles and put a comprehensive plan in action.
